

Hello Everyone.

This is again a consecutive pondering and this time I cannot assure you that you will understand or can follow the thought process completely, if you haven't looked at the previous ones.

I will have a closer look at the platonic solids again and add some other ponderings into it.

I dedicate this piece to all the like hearted people.

"Bear" with me, for I might just show you how to find your way back home.

Prelude:

"One does not become enlightened by imagining figures of light, but by making the darkness conscious."

(C.G. Jung)

Visualizing or looking at the light is external and basically everything "new age" is doing. Integrating the shadow and making the dark conscious, so in essence switch on your inner light is the internal part. It may seem like the harder thing to do at first, but as Thomas said, on the long run it is the easier path of the two.

We have been trained so hard to think in a 2 Dimensional way and almost everything thrown at us, be it images, ideas or thinking patterns are in some way 2 Dimensional. We really have to overcome this 2 Dimensional programming of ourselves and should apply 3 Dimensional thinking to everything in this world. Also remember that you are a multidimensional being, so don't forget to use the upper Dimensions as well.

When we talk, we also talk in multidimensional ways that only our heart understands. I laid out to you why, because the heart is the centre of you and thus the observer.

Some people even sound only 2 Dimensional when they talk and some even only 1 Dimensional. But there are some people you meet that speak directly to your heart, so on all levels of existence so to speak. Notice the difference.

Part 1:

Just as a side note I wanted to balance the conception part I did and here is what I think is the male part of it.

The male part of conception is at 1st the necessary part to navigate through dimensional spheres and 2nd to protect the spirit while anchoring.

So now let us take an even closer look at the platonic solids but at first let us look at them on a geometric level.

At first for everyone who doesn't know that: All platonic solids are regular polyhedrons, which means "that the faces are congruent (identical in shape and size) regular polygons (all angles congruent and all edges congruent), and the same number of faces meet at each vertex."

And the 5 platonic solids are the only geometric structures that fulfil these properties.

In other words, their 3D geometric structures are probably among the most harmonic and balanced ones you will find in this realm.

Now if you look at the 3 dual pairs, you will find that each of them has at least one body that is made out of triangles.

So the double Tetrahedron has itself as a dual pair, thus it is the only dual pair, that is made of 2 triangle shaped structures.

So we have 3 edges on each face.

The next pair would be the Octahedron coupled with the Hexahedron (cube).

The Hexahedron has 4 edges, which is a square and one edge more than a triangle has.

The third dual-pair is the Icosahedron and dodecahedron.

The dodecahedron has 5 edges on each face which is again one more than the hexahedron has.

The amount of edges of the dual partner is why I put it in this order.

Tetrahedron	-	Tetrahedron
Octahedron	-	Hexahedron
Icosahedron	-	Dodecahedron

(Side note this is exactly the order as described from Euclid)

I think it is important that you name the triangle structure first, for they connect the dual pairs with the above and below singularity when balanced.

You will note that there is no circle within the geometric structure, but I will show you my take on it later on.

Now I had a moment where I got 12:21 on the clock and I thought this is true, everything is a dual itself and has a counterpart so to speak. Then my search began to look for the counterparts to the one already described to you in the previous ponderings.

Double Tetrahedron:

Let us start with the double Tetrahedron. I mentioned how I made the connection to the Chakras. By thinking a little more about it, a thought appeared that I heard of another relevant Structure that is made out of 7. The spiritual bodies. I looked up the THI Book "To the Heart of the Matter" and looked at the chart which explains the relationship between the number of primary matters and the spiritual bodies.

If you look at the last table column in the picture attached you will find that each spiritual body has a complementary Relationship to another one, because of the mirrored Primary Matter setup.

Complementary relation ship:

Physical	- no dual partner!
Etheric	$6+1=7$
Astral	$5+2=7$
1 st Mental	$4+3=7$
2 nd Mental	$3+4=7$
3 rd Mental	$2+5=7$
Not a sphere	$1+6=7$

So there are 3 pairs as follows

Etheric	-	(Not a sphere) -> Singularity?
Astral	-	3 rd Mental
1 st Mental	-	2 nd Mental

The Primary matter is external of you as a quality in this universe but also through your spirit or connection to the singularity you can receive them, so you can develop properly in my opinion.

So I laid the spiritual bodies as the Chakras around the corner points of the double Tetrahedron and arranged it so that the pairs are on the same corner point.

Octahedron:

I already had the direction and elements within the Octahedron but there is more to it. If you look at a compass and imagine it to be a 3 Dimensional object you will notice that it looks like a 2D Image of the Octahedron! The black and white each represent half of the Octahedron structure in a 2 Dimensional image.

Now I thought really hard about this and I searched my brain and came up with "true" north and "true" south as the 5th and 6th direction. I didn't know where I heard about that but luckily Thomas revealed that in the recent "Angels, Demons, Codes and Lines" show. So the vertical directions are "true" north and "true" south.

Thomas said something like this. How can you find "true" north on a 2D compass?

The answer is you can't because it is not on it!

Well if you look at the Octahedron as a 3Dimensional compass you might be able to just do that!

Hexahedron:

I laid out the hexahedron as the foundation of the universe and thus representing the primary Matters but what is the counterpart to that? I got some hints for this part where I was asked to look at "circling the square" and "squaring the circle".

So I did just that. First to put it in a nutshell "circling the square" and "squaring the circle" is a procedure to find a circle and square which have the same surface area. I thought that I heard Thomas mentioning that Pi once was a natural number which would make the ancient procedure not only more valid but would explain why they were able to do it in an easier way than we do it nowadays.

But I looked at it in a different way, because the words sounded very interesting to me. It implicates that the circle and square have a unique relationship.

I thought the circle is the binding and in 3D the circle is the sphere. Does the circle means, that the square or foundation of our universe is bound or held together by a circle or sphere?

But somehow this didn't resonate to me. There is some truth to it that our universe has a shell so to speak but the next thought seemed to me more accurate.

I remembered the quote from Walter Russel "In the Wave lies the Secret of Creation"

So I thought the primary Matters are one thing and the Octave as in music is another thing. In other words: If you don't think in a circle, but in a wave form than everything makes more sense.

It may sound weird at first to connect the square with a wave but if you think about a foundation it makes sense somehow.

Also in a way the number 8 (8 corner points) can be looked at, as 2 spirals going around a body which meet at the beginning, the middle and the end point.

Icosahedron:

I connected the DNA to the Icosahedron and than it occurred to me that there are also 12 Stargates. The external Star gates might be connected to other planets but the internal Star gates of your DNA are in my view Dimensional Gates so we have one Gate for each Dimension.

Dodecahedron:

So back to Kevins Presentation. He said in the original calendar we had 260 days a year. And that would amount to 13 months of 20 day each. That could mean a relation of the Dodecahedron to the quality set of Time in this dimensional space.

There is another thing I came up with. I had a recent thought that, in all languages known to me the way we count is that we have a specific word for numbers up to 20 and after that it repeats. I thought that is very interesting. If you apply a waveform to it as I did in the picture attached. You will have 9 points on each half of the wave. 0 is your start **10** is your centre and **20** is the end point with the +1 being the first point of the next wave. So the wave hits the baseline 3 times in one full cycle. (After have written this down I looked at the clock and it said 10:10, that was an interesting synchronicity to me)

That would also explain why we have 10 fingers and 10 toes, which would be a reference to that.

But as written before I don't think it represents the wave. In my view this is related to the Akashic record, which has all major points of the wave recorded onto it. That would allow it to reconstruct the wave, thus it has all the knowledge inside. The other relation I came up with is another outside the box thought. You could relate to our Chakras as "Gates" and to our DNA as Gates. When we have 7 Chakras and 12+1 DNA Strand then this would add up to 20 also!

$$7+12+1=20$$

Still I think the Dodecahedron might be only related to the Akashic record, which is split up in 2 or possible 3 parts.

The first part is the wave of this dimensional space. The other one would be the connection to the waves of the other Dimensions. This would give us 20+1 possible Akashic records, depending on how you want to look at it.

One thing though that would fit really well with the akashic record is the 20 fundamentals of the Universal law embedded into it. Or 20+1?

Also this adds up beautiful to its dual-partner the Icosahedron. It records and recorded every memory within our DNA and within every Dimension!

One thing maybe no one noticed but the way I count the double Tetrahedron is different than the way I count the other platonic solids. I structured it into double the corner points and one top and one bottom point. On the other platonic solids I counted all Edges and related them to something meaningful. This seemed to fit just right. I think the key in me doing so was that the double Tetrahedron contains itself twice. The other platonic solids are not split up in its structure so that is why you count all the edges in my opinion.

If you look at the vertex configuration again, as I already laid out the double Tetrahedron adds to 9. So it is the only one which is complete onto itself. But as it has a counter part it adds up to 18! So as described in the Dodecahedron section it represents one full cycle (9+9 with a start, centre and end point) in my opinion.

So the other dual pairs need their partner to reach the 9!

Octahedron - Hexahedron

3 = 3

$$3+3=6$$

3+6=9

Icosahedron - Dodecahedron

6 = 6

$$6+6=12 \rightarrow 1+2=3$$

$$6 + 3 = 9$$

If combined they build a second full wave sequence (9+9).

In other words these make up for two wave sequences. Is this the external duality, with the (vertical) inner wave as your 3rd full sequence? I attached also a picture how I view the duality system.

Well let us go back to the other thought I put out in my last pondering that our body is a craft.

The way I placed the double Tetrahedron over the body, was that the heart is at the centre, which leaves your legs and arms outside of the geometric structure. So your body and head is representing your craft. In the physical world you navigate this craft with your arms and legs! Your spiritual bodies can navigate this craft on a whole different level; if you think that they can take up any form you want them too.

I also remembered that Thomas said that you coat the craft with your DNA. If the Icosahedron represents your DNA then this is one of the forms your PSI field might possibly form when operating the craft.

That could possibly also be generated with other Technologies.

I had an interesting thing that happened to me. I had to lock my bicycle trailer in a backyard and was given a key to the house. I couldn't open the door though with the key given to me. I could insert the key but I couldn't turn it. There was another guy that had to open the door for me. When I wanted to lock the trailer I couldn't turn the key inside of the lock for the trailer. It was stuck inside the lock. I had to use my own lock and my own key so to speak to lock the trailer finally. As I went out the backyard there was a black cat crossing my way which seemed to be a matrix connection there I don't know. Luckily there was just one! Then on my bike again there was a guy who was singing really loud: "don't give up until".

This weird occasion led me to another thought. The Tetrahedron is the key and the lock. If you put them into a star Tetrahedron (3D Star of David), then you lock yourself up. If you align them again with your heart centre then you get the double Tetrahedron and become a diamond. By doing so, you become the key. In relation to the craft analogy the Star Tetrahedron could also mean that you put your craft into "parking" mode. And the diamond is representing your fully ready to flight craft.

Part 2:

I had another look at the primitive hut and looked at it and thought something doesn't add up. Why are they showing the fundamentals of Architecture within a tree?

I thought could this be related to the tree of life and that it actually describes the fundamentals of the tree of life?

So I looked at the columns again and drew them up into the most basic form with a base, a shaft and an entablature. This reminded me of the III piece I did.

In Architecture there is also a vertical order of 3 columns on top of each other. So I drew 3 columns on top of each other.

I also had a look at the tree of life in the Internet and found a good image but I couldn't make sense of how this would fit into a 3D geometry. Before I went to bed I remembered ("everyone that ask, receiveth"), so I asked my higher self (ask Internal, not external!). What is the 3D geometrical Structure of the Tree of Life?

When I woke up and thought a little more about it I came up with this. It is 3 double Tetrahedrons on top of each other!

Also if you draw the columns the way I did, then you could form a triangle on the base and the entablature. That gives you 2 Triangles which could form a Diamond (3D -> double Tetrahedron)

If you look at a tree and the drawing of the column you see that the base and entablature are completely opposite to each other. So if you turn them you get a double Tetrahedron.

Also in a tree the roots go downwards and the crown goes upwards.

Something else interesting to note is that we have a root and crown chakra which is also odd because that is a relation to a tree. And the way I placed them they are on top of each other. Very interesting.

Now take a close look at the attached picture and you will find some interesting things that come with the 3D geometrical Structure of the Tree of Life.

The first interesting thing is that the picture from the internet comes up with a 12 point Grid. With 3 double Tetrahedrons you come up with a 13 Point Grid!

Also the Tree of life only forms if you connect all the corner points with a vertical line. Then you can see the pattern very clearly.

That brings a column structure that is perfectly described with: As within, so without, as above so below:

III	I
III	I
	I

Three horizontal columns on the outside on the upper half/male hemisphere. Three horizontal columns below on the lower half/ female hemisphere and 3 within the double Tetrahedrons.

That makes 9 columns in total!

$$3+3+3=9$$

You could also see the middle column as one giant one, which would then add up to 7.

$$3+3+1=7$$

There are 2 egg timers in the tree of life, which are between the transitioning of levels.

That gives you 2 internal transition points and two transition points on the outside.

You have 3 centre suns and 2 or 4 suns between the double Tetrahedrons. This would make it 5 or 7 suns in total.

3 centre suns could be a relation to Thomas mentioning that we have 3 suns.

The Tree of Life is build with 3 double Tetrahedrons which represent the number 7 or the number 9.

$3 \times 7 = 21$

$3 \times 9 = 27$

The Tree of Life has 13 Dimensions or corner points. Exactly like the Icosahedron's.

Each level contains 3 Dimension -> thus 3,6,9

There are always 3 connected Dimensions. So even in the higher levels you could say that there are made up of 3 Dimensional spaces. So the platonic solids seem to be the foundation also in the upper levels but I could be wrong on that.

The structure in my opinion contains the 3 development stages which maybe have their own 7 Chakras and spiritual bodies?

7 planetary

7 cosmic

7 universal

You also see that the level we are in is made up of 2D, 3D and 4D. That would explain Thomas saying that we have a 4th Dimension in our realm. Also the 5D ascension gets a whole new meaning because 5D is a transition point to the next dimensional level so to speak.

So ascension to 5D means, ascension to the next Dimensional plane which is the cosmic plane going from 6D to 8D.

The next ascension point is 9D to the Universal level. The Universal level goes from 10D to 12D.

You leave the universal tree at the 13D transition point.

What are leafs and branches of the Tree of Life? For me a double Tetrahedron looks like a leaf so you could look at the big triangle incorporating the tree of life as a leaf on the universal tree! The branches are the connections between the Double Tetrahedrons in that said leaf!

If you look closely at a leaf in nature it contains branches, a stem, a bottom and top. So everything is inside a leaf what is inside the whole tree!

If the geometry of the leaf changes, the geometry pattern within that leaf can change. I think there are most definitely varieties of Primary matter, platonic solids and basic structures.

But it seems that within the leaf, the principles stay the same!

The tree crown in my opinion is a reference to our crown chakra which is also a reference to the crown of monarchs (Internal Monarchs). It is the highest level of development in this universe at the tree crown. We are our own Monarchs. Also the "Crown" of creation is a notion that we are able to reach the highest dimensional levels possible.

I also thought about the saying the apple doesn't fall far from the tree. I thought the apple represents the Torus energy field. So I thought again about the circle and thought the torus field really applies to the geometric structure of the platonic solids where you have 1 gate on the top and bottom and one in the centre. I laid a Torus field over each double Tetrahedron to visualize that. Now the vertical line travels right through the torus fields, whereas the external wave is going around them.

The one thing I also thought about is that the centre of the Tree of life could be seen as a Hub, or in other words the solid centre of a wheel. The wheel of the universe/life? Also note that Chakra means "wheel". I haven't come up with something that satisfies me, so if you have any input I would be glad with every hint given.

The Tree of life represents the fundamentals of Ark-i-ecture, or the architecture of this universe.

Ark is a craft, i is the "eye" and tecture is to weave and to fabricate.

In the Movie Matrix Neo is a Hacker who is trying to rewrite the Matrix in essence. The key is, we are all architects and we don't have to rewrite it. We can completely write a new one.

That is why **we are the blueprint!**

Part 3:

Now let us visualize some things to gain a new perspective with all this stuff about geometry.

"If life is just the Highway then your soul is just the car"

Soul essence is connected to how developed your spiritual bodies (etheric, physical, astral and mental) are and how good you can navigate them from my perspective.

Thomas mentioned that the crafts are coated with our DNA (Icosahedron??)

This is the souls DNA coating the craft with it.

I think of it like this:

Spirit is the driver

Soul is the steering wheel and engine.
Physical is your car or craft!

The awakening of the soul could be seen as the spirit finding out that it holds the lock and the key.
So it is the moment where you put the key in and ignite the engine so you can drive/fly your car/craft.

Now if you put a cord in a circle it binds, if it is flowing in a clockwise spiral it nurtures! The inorganic anti-clockwise spiral wave harvests!

I visualized for you the most common sequences known to us in a wave form.

0-9 → Numbers

0-12 DNA+Clock+Dimensions

0-26 Alphabet

Also remember that in a coordinate system there is only one vertical line but two horizontal lines.

The horizontal lines are the parallels; they put you in the grid and are the duality.

The vertical line is the triality, which lead you to your way home.

Only with all three of them you end up with a 3Dimensional spiral wave. The 2D "wave" that is always presented to you is portrayed as if the y-coordinate would go vertically which it is clearly not doing!

Think of it like this. Z is the last letter of the Alphabet and your way out of the infinite loop sequences.

Maybe now on June 21 it is time to finally switch onto the internal wave which takes you straight up without the other ups and downs.

Think of the year as a cycle as Kevin did show you the Great year in a circle and also as a wave. If you apply the wave pattern you will find the internal and external wave are meeting at 3 points, the start, the middle and at the end point. In the year that is 21dec – 21 June – 21 dec. (21 → 2+1=3).

So in essence $3+3+3=9$

I have shown you the outside columns, the outside spiral and how the internal vertical spiral looks like.

Now remember that the only thing that exists is a dot, for the rest is only space. Then think of a star as being a dot.

Imagine then that the wave is made of infinite dots flowing in a circle motion around you and that there is also an internal vertical spiral that meets with the external at each beginning, middle and end point.

Now try to visualize that you jump from the external wave onto a dot (star) on the internal wave and go straight up without all the detours.

"I stole a ride on a passing star
Not knowing where I was going
... Until the heavenly gates
Were sighted at last"

Starrider!

Take the dot (star) on the inner wave up to the "true" north and onto the next evolutionary stage, and become a star rider.
"Will they help us grow, to one day be star rider?"

Part 4:

Now if you read, hear or see something and think I really would like have said that, remember what I wrote in the last piece. The want is something external of you; the fact that you resonated with what was said, written or seen tells you that it was your inner voice speaking to you. That is the internal part of it.

The problem is that we trained our ego so hard to look out for our wants, not for our needs but we can reprogram it at any given time. The choice is **o-urs** to make.

Now I was pondering a little about the recent chat activity about soul mates, twin flames or twin souls and this is what I came up with.

First I have to say that I resonated strongly with some of it, but remember that resonating is the internal part!

The second thing that I thought was that the want for finding your twin flame, soul mate is a trap. It makes you seek something external of you.

If you do your inner work and truly find yourself, then you will manifest and project it externally. Then your partner appears, which, is you all along.

Also an interesting thing to think about is that when we have a spirit family that would imply that our spirits can mate with each other or our spirits can "split" themselves up into a cluster. If you think that this process happens outside of time, then this leaves the opportunity that you are more than one person connected to the same spirit. In essence we all go back to source in general but still there is a difference of our genetic make up so to say, which consists of different levels.

In my Understanding that is the physical DNA, the soul DNA and the spirit DNA. That would explain why siblings are sometimes so different to each other, because they only share the same physical DNA but not the same soul/spirit DNA! The concept of a "cluster" has been portrayed in the series sense 8.

Now I also came back to the word HU-man or Higher-Universal- man and thought somehow that it would be much more powerful to call oneself a Higher-Universal being. It would bring the Universe also closer together by not putting another label on top of it. For we are only a spirit, that is navigating this vessel with our soul.

Part 5:

What is the only thing you can hear within the sound of silence?

Talking without speaking

Hearing without listening

There is only one part in our body that can hear the indistinct sound of the snow falling down and that is our heart!
And it is within the silence where you can hear the heart the loudest!

For those that still think with the mind and try to make sense of it all, I advice you, as laid out in the geometry to go into the heart, for the heart knows.

It is only within your heart you truly – find, that
It is only with your heart you truly – see
It is only with your heart you truly – hear
It is only with your heart you truly – innerstand
It is only with your heart you truly – create
It is only with your heart you truly – wake up
It is only with your heart you truly – answer the call
Knock, knock!

**Now go out with the confidence of who and what you are,
and excel in yourself and in doing so inspire others.**

You are a multi dimensional being operating simultaneously on many levels,

you are not here to conform,

you are not here to be stifled,

you are not here to be enslaved,

you are not here to be abused, or to compete with your friends, family or neighbors.

You are here to be the best you can be and do so as a crown of creation.

If you lead life in love and care - you will prevail,

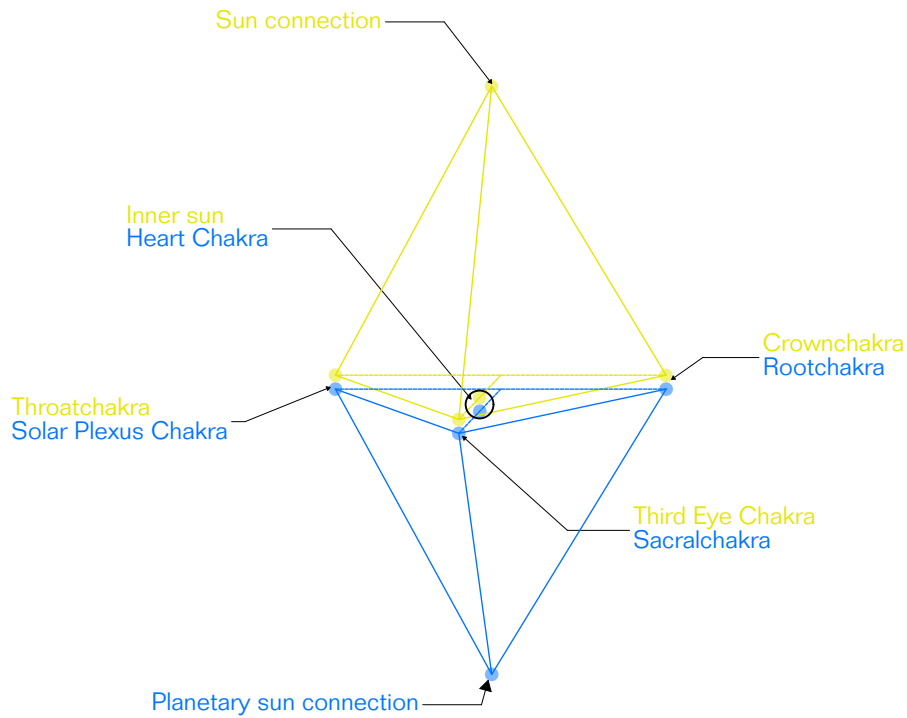

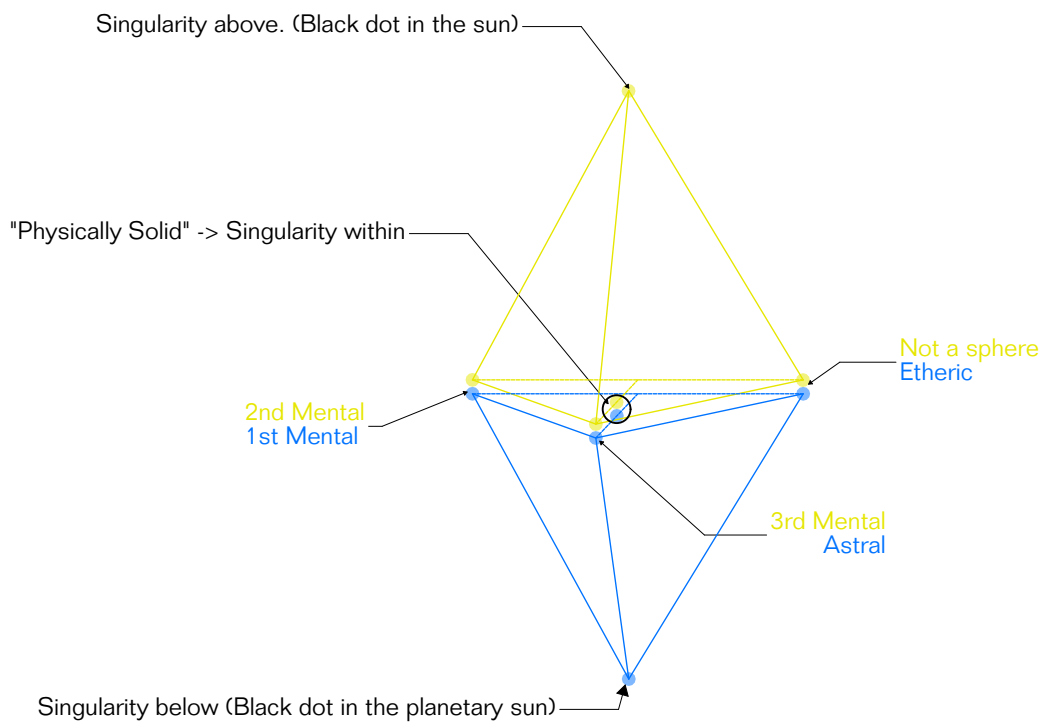

If you lead life in fear and anger - you will fail.

Feel free for you to be the person you wish to be,

Not the person who conforms to what others want them to be.

(I rearranged one of my favourite pieces from Thomas to the way I remembered it. I hope you enjoy it, as much as I do)

Tetrahedron

The spirit (or soul) comprises a system of bodies which living matter evolves in the process of adapting to the environment. By truly understanding the spirit, we hold the key to grasping a host of natural phenomena — conception, death, transformation, clinical death, multi personality, psychic dysfunction, and others. Each body of the spirit is a structural copy of the physical body on a corresponding planetary level.

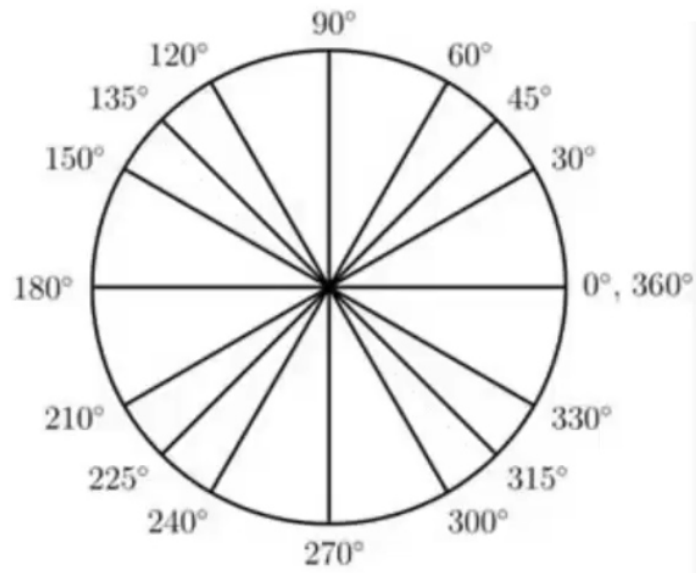

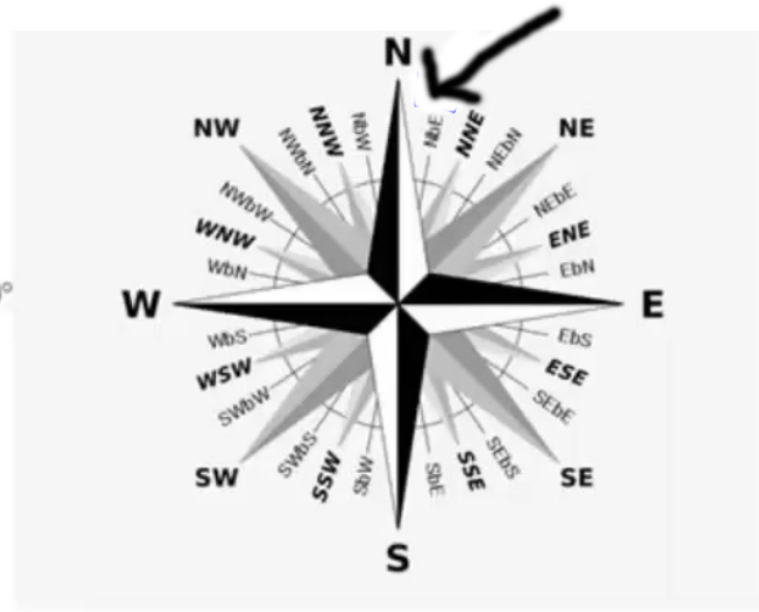

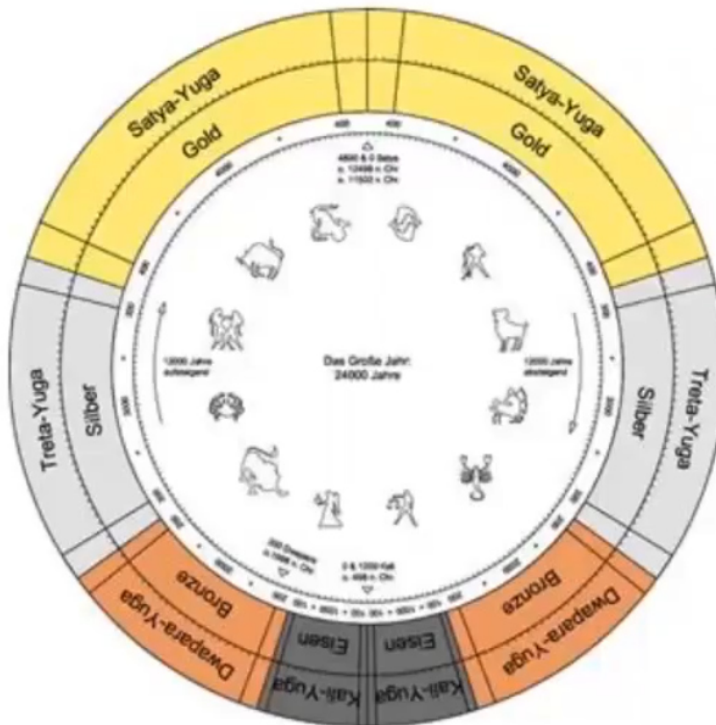

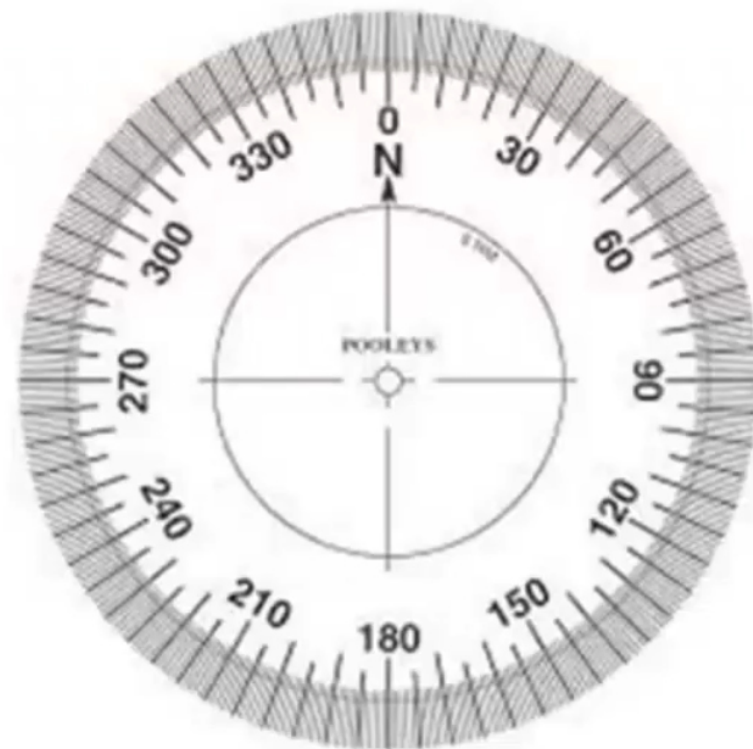

$$7 \times 7 = 49$$

↓
13!

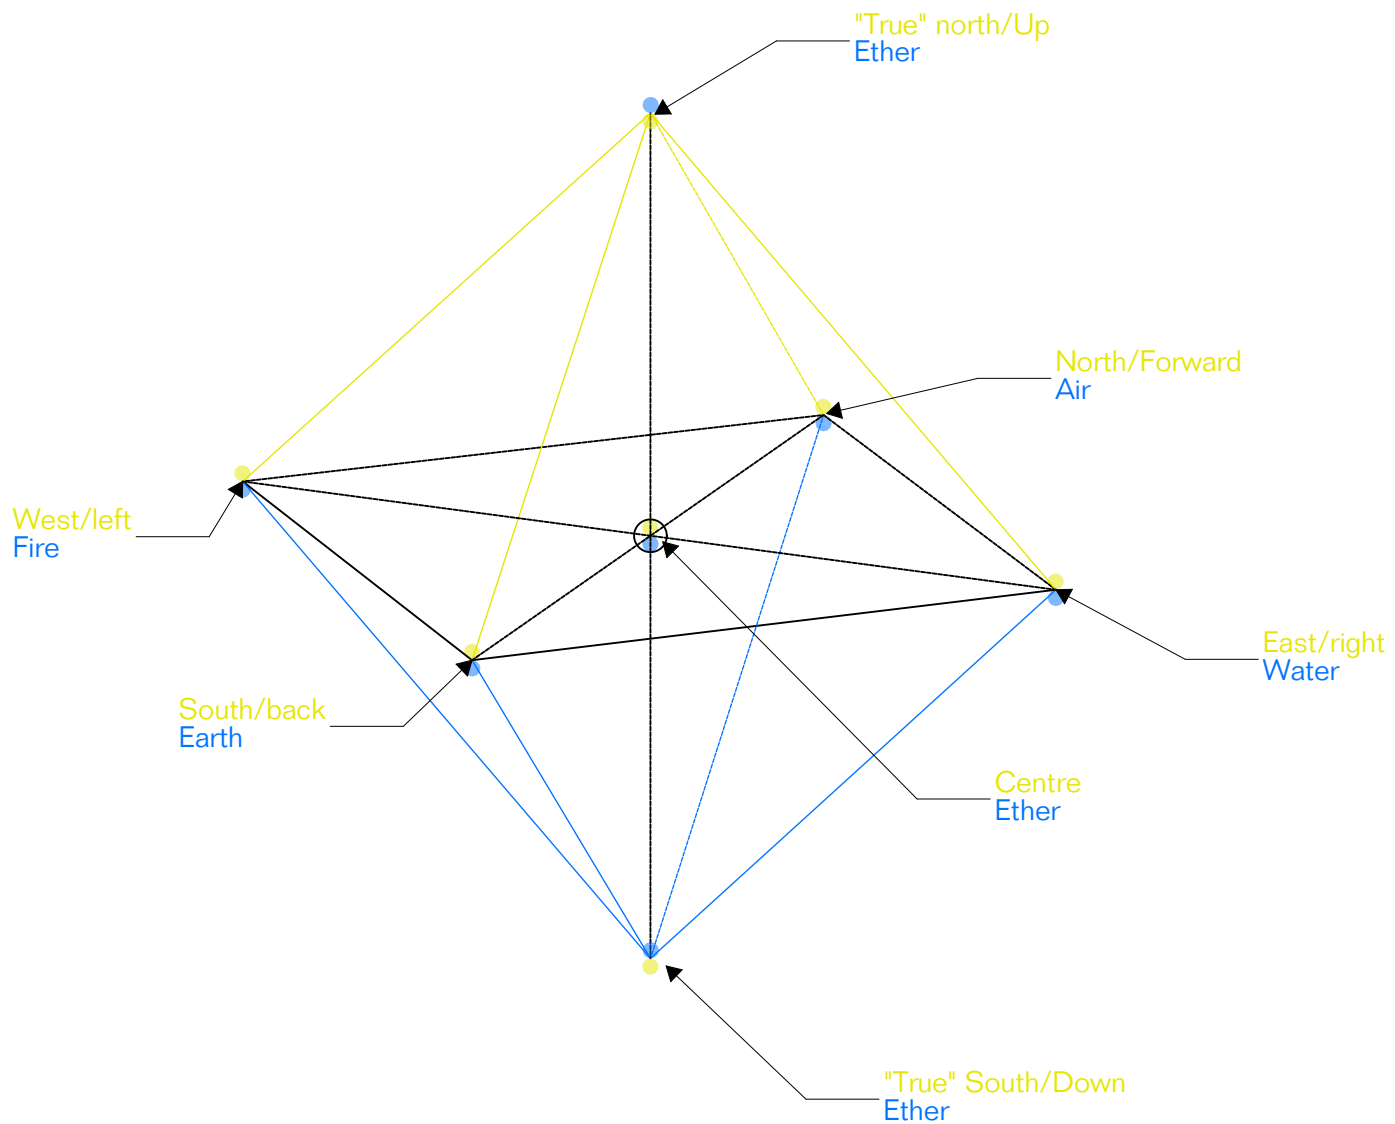

Complementary relationship between number of **primary** matters in Earth planetary spheres and human bodies:

Earth: Qualitative Spheres	Number and Type of Primary Matters	Man: Spiritual Bodies	Number and Type of Primary Matters	Complementary Relationship
Physically Solid	7(ABCDEFGG)	Physically Solid	7(ABCDEFGG)	- 7
Etheric	6(ABCDEF)	Etheric	1(G)	6+1=7
Astral	5(ABCDE)	Astral	2(GF)	5+2=7
First Mental	4(ABCD)	First Mental	3(GFE)	4+3=7
