

Should I Vaxx?
That is the question.
To VAXX Or Not To VAXX?

What is the answer?

- **Have you thoroughly read the list of vaxx ingredients and comprehend what they are and how they are designed to function?**
- **Do you know what all of the adverse effects are or can be?**
- **Do you know the true statistics of adverse events?**
- **Has the vaxx administrator advised you of all possible adverse effects & their implications?**
- **Do you trust that your Government & the pharmaceutical industry share your interest in what's best for you & your health?**
- **Did you know your Government has granted the pharmaceutical industries indemnity from all liability for their "vaccine concoctions"? It means you have no recourse to sue them in the likely case of adverse effects caused by their vaxx.**
- **Did you know that the vaxx available is experimental?**
- **Have you done your own unbiased research?**
- **Have you noticed a large increase of pharma vaxx ads on TV?**
- **Why the big push to convince you?**
- **Does the "vaccine concoction" protect you from contracting and spreading?**
- **Will your decision be based on fact or out of fear?**

All are very good common sense approach questions.

Until you have the answers to all of the above, you will not be informed. Therefore unable to provide Your Informed Consent to the very first question.
